

USB 2.0 Standard Connectors

UX Series

Meets requirements of USB 2.0 Standard
USB 2.0 certified

■ Features

1. Compatible to USB 2.0 Standard

The UX series connectors are certified by a certification organization specified by the USB Association.

The connectors are able to meet high-speed transmissions up to 480 Mbps, delivering optimal PC peripheral connections.

2. Low skew structure

An equal electrical length design between twisted pairs (contact numbers 2 and 3) for both the receptacles and the plugs provides for a theoretical zero skew. (Fig.1)

3. No heat-shrink tube needed

The wire termination section of the plug is fixed on the mold. In addition Hirose's unique metal shield structure allows the over-mold resin to easily flow into the wire termination section preventing short circuits from occurring even without using heat shrink tubing. This feature allows shortening of the length of untwisted part resulting in impedance unmatching at the wire termination sections.

4. Easy to handle plug

The plug is a snap lock type that gives a clear tactile click, assuring secure connector mating. The over-mold section also has a thin structure for space saving.

5. Metal shield for SMT or DIP mounting

Metal shields with either SMT or solder dip type are available to match the PCB design.

6. With or without positioning boss

Versions with or without positioning bosses can be selected to match the PCB design.

7. Suitable for automatic mounting

A heat resistant tape for vacuum pickup is applied to the receptacle allowing for the use of automatic mounting machines. Receptacles without tape are also available.

8. RoHS compliant

All materials and substances used to produce this product comply with RoHS standards.
